

DISH prioritizes security across all aspects of 5G network

- In new white paper, DISH outlines how it is using O-RAN architecture to maximize security in ways not possible with traditional networks

LITTLETON, Colo., April 8, 2021 /PRNewswire/ -- DISH today issued a white paper describing another key differentiator of its cloud-native Open Radio Access Network (O-RAN): security. While DISH has highlighted the benefits to consumers and enterprises that will result from its cloud-native architecture, this marks the first time the company has outlined some of the key security features, woven into the fabric of its network.

This white paper discusses how DISH is prioritizing network, system and end-user security from the outset of network deployment, the importance of a trusted software supply chain and how DISH's 5G network security is more agile and scalable than traditional networks. In addition, the paper highlights how DISH's strategic security partners contribute to the security model of DISH's cloud-native, 5G O-RAN.
