

# DISH Explorer Second-Screen App Enhances TV Viewing Experience on iPad

**Discover New Shows – Explorer app recommends programs based on real-time TV viewing and social media trends**

**Engage with Fans – Within Explorer app, access Twitter and Facebook feeds and participate in social conversations related to live programs**

**Find Big Games – Explorer shows real-time trends for popular sporting events**

**Control the Experience – App can serve as remote-control for Hopper HD DVR features, including channel guide, DVR and on-demand video**

LAS VEGAS--Today, DISH (NASDAQ: DISH) introduced the DISH Explorer™ app for iPad, an intuitive second-screen app for the Hopper™ Whole-Home HD DVR platform that combines program-discovery tools, social media engagement and remote-control capabilities.

“Customers are already using tablets while watching TV but, until Explorer, it had been two separate experiences,” said Vivek Khemka, vice president of Product Management at DISH. “What we’ve done is develop an integrated, seamless experience between the tablet and the television; only the Hopper creates an entirely new viewing dynamic.”

Available tomorrow, DISH Explorer expands the functionality of the Hopper by allowing customers to:

- Discover popular and trending shows, including sporting events, across hundreds of live-TV channels, DVR recordings and on-demand programs;
- Engage with fans of the same show over Twitter and Facebook using the iPad;
- Control the Hopper from an iPad, including channel guide navigation and DVR management;
- Search live TV, DVR and on-demand programs using iPad’s keyboard instead of the remote control.

The new app recommends shows and reveals popular programs by cross-referencing social media television viewing trends and real-time viewership data from DISH’s customer base.

DISH Explorer allows customers to connect with the social media community about their favorite shows. Using the app, customers can log in to Twitter and Facebook and, in real-time, comment and track posts from fans of the shows they are watching.

For the sports enthusiast, Explorer incorporates Thuuz™ ratings to identify the hottest games on TV and provides viewers with real-time sports stats when watching live events on the Hopper. The Explorer’s view into trending data can signal sporting events that are quickly becoming ‘must see’ events.

“The Thuuz ratings on Explorer means sports fans can quickly see the potential no-hitters, the shut-outs and the upsets forming live before the sports recap on the evening news,” said Khemka. “Seeing the big events live is always better and Explorer helps deliver that experience.”

DISH Explorer connects to an Internet-connected Hopper via Wi-Fi and eliminates the need for the remote control. The app makes it easy to navigate all Hopper programming options with the iPad.

“What we’ve done is develop an integrated, seamless experience between the tablet and the television; only the Hopper creates an entirely new viewing dynamic.”

DISH Explorer app will be available at no charge in Apple's App Store on January 7.
