

American Water Shares Tips to Find and Fix Leaks During U.S. Environmental Protection Agency's Fix a Leak Week 2025

CAMDEN, N.J. – MARCH 17, 2025 – [American Water](#) (NYSE: AWK), the largest regulated water and wastewater utility company in the U.S., highlights the U.S. Environmental Protection Agency's (EPA) Fix a Leak Week 2025 by providing tips to help customers find and fix leaks in their homes.

"Fix a Leak Week is a great opportunity for customers to focus on using water wisely by reducing water waste, which saves water and money," said Cheryl Norton, Executive Vice President and Chief Operating Officer, American Water. "American Water plans to invest \$42 billion over the next ten years across our nationwide footprint to support needed water and wastewater infrastructure renewal, including replacing and upgrading aging pipes and using leak detection technology to find and fix leaky pipes before they break. These investments help increase our efficiency and resiliency, which means less water wasted and better service reliability for our customers."

According to the EPA, leaks are present in about ten percent of households, which can waste 90 gallons of water or more per day. Below are a few common places to check for leaks inside your home:

- **Toilets:** A defective plunger ball or flapper valve can waste water by causing the tank to continually drain and refill. To test, drop a dye-tracing table or a small amount of food coloring in the tank and wait 5 minutes. If the dye-colored water seeped into the bowl, you may have a leak and need to replace the defective part.
- **Faucets:** A leaky faucet can waste nearly 3,200 gallons of water per year. If you notice one dripping, try closing it tightly. If it continues to drip, the washer may need to be replaced.
- **Washing machine:** If you see water on the floor under your washing machine, that could indicate a leak. You may want to call your washing machine repair service.
- **Bathtubs and showers:** Check the spout and shower head for dripping water. New washers may be needed on the faucet handles.
- **Boiler system:** If the sound of running water is continuous and does not stop and start periodically, there may be a leak. Contact a professional to check it out and perform repairs.
