

Iowa American Water Shares Tips to Find and Fix Leaks During U.S. Environmental Protection Agency's Fix a Leak Week 2025

DAVENPORT, IOWA. – MARCH 17, 2025 – [Iowa American Water](#) highlights U.S. Environmental Protection Agency's (EPA) Fix a Leak Week 2025 by providing tips to help customers find and fix leaks in their homes.

"As we celebrate Fix a Leak Week, it's crucial to recognize the significant benefits of addressing leaks in your home or business. Fixing leaks not only conserves water, a precious resource, but also reduces your utility bills and prevents potential damage to your property," said Brad Nielsen, President of Iowa American Water. "By taking proactive steps to repair leaks, we contribute to a sustainable future and ensure the reliability of our water systems. Let's work together to make every drop count."

According to the EPA, leaks are present in about ten percent of households, which can waste 90 gallons of water or more per day. Below are a few common places to check for leaks inside your home:

- **Toilets**

- A defective plunger ball or flapper valve can waste water by causing the tank to continually drain and refill. To test, drop a dye-tracing tablet or a small amount of food coloring in the tank and wait 5 minutes. If the dye-colored water seeped into the bowl, you may have a leak and need to replace the defective part.

- **Faucets**

- A leaky faucet can waste more than 3,000 gallons of water per year. If you notice one dripping, try closing it tightly. If it continues to drip, the washer may need to be replaced.

- **Washing machine**

- If you see water on the floor under your washing machine, that could indicate a leak. You may want to call a repair service.

- **Bathtubs and showers**

- Check the spout and shower head for dripping water. New washers may be needed on the faucet handles.

- **Boiler system**

- If the sound of running water is continuous and does not stop and start periodically, there may be a leak. Contact a professional to check it and perform repairs.

Iowa American Water invests about \$40 million each year across its service territories to replace new water mains, water and wastewater treatment facilities, hydrants, meters, and other distribution system upgrades to help make sure our customers receive safe, clean and reliable water.
