

Missouri American Water Shares Tips to Find and Fix Leaks During U.S. Environmental Protection Agency's Fix a Leak Week 2025

ST. LOUIS, MO – MARCH 17, 2025 – [Missouri American Water](#) highlights U.S. Environmental Protection Agency's (EPA) Fix a Leak Week 2025 by providing tips to help customers find and fix leaks in their homes.

"Fix a Leak Week is a good opportunity to remind our customers the importance of using water wisely," said Rich Svindland, President, Missouri American Water. "A significant amount of time, resources and expertise is used to deliver clean, safe drinking water every day, so it is important to reduce waste whenever possible."

According to the EPA, leaks are present in about ten percent of households, which can waste 90 gallons of water or more per day. Below are a few common places to check for leaks inside your home:

- **Toilets**

- A defective plunger ball or flapper valve can waste water by causing the tank to continually drain and refill. To test, drop a dye-tracing tablet or a small amount of food coloring in the tank and wait 5 minutes. If the dye-colored water seeped into the bowl, you may have a leak and need to replace the defective part.

- **Faucets**

- A leaky faucet can waste more than 3,000 gallons of water per year. If you notice one dripping, try closing it tightly. If it continues to drip, the washer may need to be replaced.

- **Washing machine**

- If you see water on the floor under your washing machine, that could indicate a leak. You may want to call a repair service.

- **Bathtubs and showers**

- Check the spout and shower head for dripping water. New washers may be needed on the faucet handles.

- **Boiler system**

- If the sound of running water is continuous and does not stop and start periodically, there may be a leak. Contact a professional to check it and perform repairs.

"Household leaks, even minor ones can become financially significant over time," said Jody Carlson, Vice-President of Operations for Missouri American Water. "Customers often underestimate a small faucet or toilet leak can add up over time on a monthly water bill."
