

Illinois American Water Joins American Water Leadership to Meet with Congressional Leaders in Washington D.C.

Company discusses solutions to water and wastewater infrastructure challenges

BELLEVILLE, ILL. – July 17, 2025 – Illinois American Water joined a cohort of American Water state presidents and senior executives to meet with Members of Congress in Washington, D.C. this week. The group aimed to strengthen relationships with policymakers and discuss potential solutions to vital water and wastewater infrastructure needs across the nation.

Led by American Water President and Chief Executive Officer John Griffith and Executive Vice President and Chief Operating Officer Cheryl Norton, the engagements included representation from 11 states and more than 40 meetings with congressional offices. Key topics focused on policy issues that affect water utilities, investment in water and wastewater infrastructure, the future of clean water access and other key legislative priorities.

"Clean, reliable water is fundamental to life yet is easily undervalued," said Rebecca Losli, president, Illinois American Water. "Meeting with federal representatives is critical to advocate on behalf of our Illinois customers. It is important that policies support urgent and sustained investment in aging water systems across our communities. When infrastructure is not maintained, the consequences are serious - wasted water, disruption to service, and costly repairs that far exceed the price of proactive maintenance. We remain committed to investing in our infrastructure to continue providing clean, safe, and reliable service."

This year's fly-in underscored the need for significant investment in water infrastructure, especially given the American Society of Civil Engineers' (ASCE) 2025 Report Card for America's Infrastructure. The nation's drinking water systems received a grade of "C-" and wastewater systems a grade of "D+," highlighting the serious challenges facing U.S. water and wastewater utilities. American Water plans to invest \$40–\$42 billion over the next decade in infrastructure upgrades and repairs, including right here in Illinois.
