

New Jersey American Water to Upgrade Camden Water Infrastructure With \$400,000 Investment

CAMDEN, N.J. – Feb. 17, 2026 – New Jersey American Water is investing approximately \$400,000 to upgrade critical water infrastructure in Camden. The project includes replacing 1,700 feet of water pipe originally installed in the early 1900s with new 8-inch ductile iron water main, helping improve reliability, water quality, and fire protection for local customers.

As part of this work, crews will also install new meter pits at the curb area—within the company’s right-of-way—at properties where none currently exist. Affected customers will be contacted directly to schedule appointments to relocate their water meter from inside the property to the new pit.

Work will take place along the following streets:

- **Grand Avenue** from Berkley Street to Baird Boulevard
- **Benson Street** from Eutaw Avenue to Marlton Avenue

This investment is part of New Jersey American Water’s ongoing, [multi-year commitment](#) to strengthen water infrastructure in more than 100 communities across the state. Planned upgrades like this help reduce the likelihood of service interruptions, improve water flows for homes and businesses, and support dependable fire protection. These improvements are designed to deliver long-term value by reinforcing the system before issues arise.

Construction is underway and is expected to be completed by the end of March 2026. Crews will work Monday through Friday from 7 a.m. to 5 p.m., and weekend work is not expected unless needed to maintain the project schedule. Contractors will ensure customers can enter and exit their driveways as needed, and access to homes and businesses will be maintained.

Work is being performed by New Jersey American Water’s local, qualified contractor Pioneer Pipe Contractors, Inc., with traffic control coordinated in partnership with local officials. Motorists should use caution near work zones and expect typical construction noise during work hours. Daily cleanup will occur, and driveway and sidewalk restoration will be completed as construction concludes. Where excavation is required, temporary surface restoration will be provided, with permanent restoration after the soil has time to settle.
