

Iowa American Water Provides Customers with Leak-Saving Tips During Fix a Leak Week 2026

DAVENPORT, Iowa, March 16, 2026 /PRNewswire/ -- Iowa American Water is recognizing the U.S. Environmental Protection Agency's (EPA) Fix a Leak Week 2026 by sharing [simple, practical tips customers can use](#) to locate and address common household leaks that waste water, drive up bills, and strain home plumbing.

"Finding and fixing leaks can help customers protect their water, homes, businesses and monthly bills," said Brad Nielsen, President of Iowa American Water. "Last year, Iowa American Water invested more than \$55 million to modernize water and wastewater infrastructure across our service footprint, including replacing aging pipes, install new water mains, water and wastewater treatment facilities, hydrants, meters, and other distribution system upgrades to help make sure our customers receive the safe, clean and reliable water they expect and deserve.

Household leaks are more common than many people realize. According to the EPA, leaks affect about one in 10 homes and can waste more than 90 gallons of water each day.

Here are a few places where leaks are often found:

- **Toilets:** A defective plunger ball or flapper valve can waste water by causing the tank to continually drain and refill. To test, drop a dye-tracing tablet or a small amount of food coloring in the tank and wait 5 minutes. If the dye-colored water seeps into the bowl, you may have a leak and need to replace the defective part.
- **Faucets:** A leaky faucet can waste nearly 3,200 gallons of water per year. If you notice one dripping, try closing it tightly. If it continues to drip, the washer may need to be replaced.
- **Washing Machines and Dishwashers:** If you see water on the floor near your washing machine or dishwasher, that could indicate a leak. You may want to call your repair service.
- **Bathtubs and Showers:** Check the spout and showerhead for dripping water. New washers may be needed on the faucet handles.
- **Boiler Systems:** If the sound of running water is continuous and does not stop and start periodically, there may be a leak. Contact a professional to check it out and perform repairs.

"We all have a role to play in conserving water, our most precious resource," added Nielsen. "Many people might be surprised to find that some leaks are invisible to homeowners because they don't have obvious signs, such as water on the floor. Invisible or visible, finding and fixing leaks reduces your utility bills and helps prevent damage to your property."
