

Kentucky American Water to Start Annual Spring Cleaning

Water main flushing and temporary water treatment change to begin soon

Lexington, Kentucky – April 14, 2026 – Beginning April 27, Kentucky American Water will begin flushing its water distribution systems as part of its annual maintenance program to continue providing customers with high-quality, reliable water service.

“Scheduled annually to help maintain and improve water service, system flushing removes mineral deposits and sediment from water mains, allowing us to continue providing our customers with high-quality water,” said **Justin Sensabaugh, director of operations for Kentucky American Water**. “Along with ongoing infrastructure renewal, essential maintenance activities like flushing have consistently contributed to our tap water earning national recognition from the American Water Works Association’s Partnership for Safe Water.”

“This planned work is an essential part of our water distribution system maintenance program and also allows us to inspect our fire hydrants to confirm they are operational and to evaluate fire flows throughout the system,” Sensabaugh said. “These efforts help ensure fire departments have the water supply needed to respond effectively in emergencies.”

Flushing involves opening fire hydrants in specific areas to create increased water flows. This routine program also includes flushing blowoff valves on dead-end water mains throughout the system.

In advance of the flushing program, Kentucky American Water will implement a **temporary change in the water treatment process from April 20 through May 20, 2026**. During this time, customers may notice slight, temporary changes in the taste or smell of their water. These changes are normal, and the water remains safe to drink and continues to meet all state and federal drinking water standards. Dialysis centers, medical facilities and aquatic pet owners should take appropriate precautions during this temporary change and ensure their water treatment systems are suitable.

Additional flushing information and customer tips are available at:
<https://newsroom.amwater.com/PrepareForFlushing>.

Flushing will occur over several weeks, according to the estimated schedule below, unless operational adjustments are needed:

Bourbon County

April 30 through May 2 (rural areas)
Nighttime hours

North Middletown and Millersburg

May 18 through May 22
Daytime hours

Clark County

May 11 through May 15
Daytime hours

Fayette County

April 27 through May 9
Nighttime hours

Gallatin and Grant Counties

April 27 through May 20
Daytime hours

Owen County

April 27 through May 20 Daytime hours

Rockcastle County

April 27 through May 1

Daytime hours

No temporary treatment change will occur for these customers.

Scott County

May 11 through May 15

Daytime hours

Woodford County

May 7 through May 9

Nighttime hours

Customers may experience temporary water discoloration while crews are flushing in their area. If discoloration occurs, customers should run their cold water tap until the water clears. Customers may also wish to avoid washing clothes during flushing periods, as temporarily discolored water could stain laundry.

An online map is available to help customers determine when flushing will occur in their area: [American Water Customer Advisory Map](#). Customers with questions about the flushing program may also contact Customer Service at 1-800-678-6301.
