

Boston Scientific Sponsors New Patient Portal Dedicated to Pelvic Floor Disorders

NATICK, Mass., Sept. 15, 2011 [PRNewswire/](#) -- Boston Scientific Corporation (NYSE: BSX) is further supporting the advancement of women's health as the founding sponsor of the American Urogynecologic Society's new patient website, *Take the Floor – Voices of PFD*, which launches at the 32nd Annual Scientific Meeting, September 14 – 17 in Providence, RI.

The portal (www.voicesforpfd.org) is designed to serve as an interactive, online community for female patients to learn more about their disease and available treatment options in a private and convenient manner. The website provides access to a range of valuable resources to help women find a local physician and prepare for a discussion of their condition. Patient videos and online discussions allow patients to connect with others who may be experiencing pelvic floor disorders (PFDs), as well as pose questions to PFD physician experts.

"Boston Scientific's continued education, clinical research, and patient-focused events, coupled with our exclusive sponsorship of AUGS' new patient portal, reflect our commitment to patient care," said John Pedersen, Senior Vice President and President of Boston Scientific's Urology and Women's Health Division. "As part of our dedication to manufacturing and marketing high quality and safe products, we will continue to ensure that accurate and complete information is provided to physicians and their patients so they can make fully informed decisions regarding PFD treatment options."

"Pelvic floor disorders can be an embarrassing issue for women to discuss, but the goals of this portal are to educate women on these common conditions and begin a more open dialogue of this subject," said Sandy Culbertson, M.D., Female Pelvic Medicine and Reconstructive Surgeon and AUGS Public Relations Committee Chair. "It is important to raise awareness for those suffering in silence from PFD so they can take the first steps toward seeking treatment from their doctor."

An estimated 28.1 million women(1) in the U.S. live with at least one pelvic floor disorder. The two most common conditions are urinary incontinence, defined as the involuntary leakage of urine or inability to hold urine, and pelvic organ prolapse, a medical condition that occurs when the normal support of the vagina is lost, resulting in "sagging" or dropping of the bladder, uterus or rectum. Women often suffer in silence with these conditions due to embarrassment about their symptoms. One published study(2) reported that a third of women wait at least one to five years before seeking medical treatment while a quarter of women wait more than five years.

Boston Scientific's Women's Health business offers products for pelvic floor reconstruction, as well as a complete line of mid-urethral sling systems for the treatment of stress urinary incontinence. Boston Scientific is presenting its latest innovations at Booth 507 in the Exhibition Hall.

U.S. law restricts medical devices to sale by or on the order of a physician.

About AUGS

Founded in 1979, the [American Urogynecologic Society \(AUGS\)](#) is the premier society dedicated to research and education in urogynecology, and the detection, prevention and treatment of female lower urinary tract disorders and pelvic floor disorders.

Cautionary Statement Regarding Forward-Looking Statements

This press release contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. Forward-looking statements may be identified by words like "anticipate," "expect," "project," "believe," "plan," "estimate," "intend" and similar words. These forward-looking statements are based on our beliefs, assumptions and estimates using information available to us at the time and are not intended to be guarantees of future events or performance. These forward-looking statements include, among other things, statements regarding new product launches and launch cadence, regulatory approvals, clinical trials, product performance, product information and competitive offerings. If our underlying assumptions turn out to be incorrect, or if certain risks or uncertainties materialize, actual results could vary materially from the expectations and projections expressed or implied by our forward-looking statements. These factors, in some cases, have affected and in the future (together with other factors) could affect our ability to implement our business strategy and may cause actual results to differ materially from those contemplated by the statements expressed in this press release. As a result, readers are cautioned not to place undue reliance on any of our forward-looking statements.

Factors that may cause such differences include, among other things: future economic, competitive, reimbursement and regulatory conditions; new product introductions; demographic trends; intellectual property; litigation; financial market conditions; and future business decisions made by us and our competitors. All of these factors are difficult or impossible to predict accurately and many of them are beyond our control. For a further list and description of these and other important risks

and uncertainties that may affect our future operations, see Part I, Item 1A – *Risk Factors* in our most recent Annual Report on Form 10-K filed with the Securities and Exchange Commission, which we may update in Part II, Item 1A – *Risk Factors* in Quarterly Reports on Form 10-Q we have filed or will file hereafter. We disclaim any intention or obligation to publicly update or revise any forward-looking statements to reflect any change in our expectations or in events, conditions or circumstances on which those expectations may be based, or that may affect the likelihood that actual results will differ from those contained in the forward-looking statements. This cautionary statement is applicable to all forward-looking statements contained in this document.
