

DaVita Emergency Response Team Prepares Patients for Hurricane Season

DaVERT Shares Preparedness Tips for Weather-Related Emergencies

DENVER, June 25, 2015 /PRNewswire-USNewswire/ -- [DaVita](#) Kidney Care, a division of DaVita HealthCare Partners Inc. (NYSE: DVA) and a leading provider of kidney care services, is dedicated to sharing important emergency preparedness information for dialysis patients who might be impacted by weather-related emergencies – notably the annual Atlantic hurricane season that kicked off on June 1.

"Although experts are predicting a below-average season for the number of hurricanes and tropical storms, those forecasts cannot predict the severity of the storms and their impact on the communities they hit," said Shaun Collard, executive director of the DaVita Village Emergency Response Team (DaVERT). "It's critical to prepare our dialysis centers and our patients for any weather-related emergency that may hinder our ability to deliver treatments."

Over the past few years a number of weather-related emergencies – from hurricanes to blizzards to tornadoes to floods – have interrupted the operation of dialysis facilities across the country, impacting the delivery of life-sustaining treatments to thousands of dialysis patients. Dialysis patients comprise one of the most vulnerable patient populations as patients require life-sustaining medical treatments at least three times a week to survive. DaVERT was created to protect these very patients.

DaVERT created clear guidelines for facilities, teammates, physicians and patients to follow prior to, during and after a severe weather system. DaVERT helps prepare clinical teammates; reinforce policies and procedures; and educate and notify patients prior to and during weather emergencies. The team takes inventory of the facility and its supplies, secures the facility and biohazard storage, and prepares for on-site support of any potential operations interruptions (e.g., bringing in generators to restore power). DaVERT also practices and educates teammates on facility evacuation procedures.

How Patients Can Prepare Themselves

Dialysis patients require treatments at least three times per week and are at high risk during natural disasters and weather-related emergencies. DaVita recommends patients create an easily accessible emergency kit that includes the following:

Emergency phone numbers for doctors and their dialysis center, as well as another nearby dialysis center;

- At least three days' worth of medications with a list of the dosage amounts;
- Clean water, food and a can opener;
- First aid supplies;
- A battery-operated flashlight and radio; and
- If diabetic, a week's worth of related medical supplies.

When a widespread emergency or disaster happens, patients are encouraged to begin [at three-day emergency diet](#) immediately to limit the amount of fluid and waste their body accumulates. DaVita also recommends that patients keep a copy of the diet with emergency supplies as a guide.
