

Opsera and The Linux Box Partner to Expand U.S. Market for Opsview Open Source System Management Suite

PRNewswire
ANN ARBOR, Mich.

ANN ARBOR, Mich., Jan. 12 [/PRNewswire/](#) -- The Linux Box is partnering with Opsera Limited to become an official Opsview reseller in the United States, with the goal of expanding the national presence of this award-winning network and infrastructure monitoring software suite.

Opsview provides comprehensive system management capabilities used to monitor the health of today's most complex data centers. It enables IT managers to identify and fix issues with their systems before they impact system availability. Opsview enhances the widely used Nagios® monitoring framework by adding many additional configuration, graphing and management capabilities, while remaining 100 percent compatible. Opsview earned the Product Excellence award for Best System Management Tool at LinuxWorld Expo in 2008.

The Linux Box will provide Opsera Enterprise edition subscriptions and services to organizations across the U.S. It will also continue to offer services for the Opsview Community edition.

"The Linux Box has in-depth expertise and an excellent track record in supporting open source applications," noted Michael Walton, CEO and founder of Opsera Limited. "We are experiencing strong customer growth in the U.S. and The Linux Box should help us to tap the full potential of the U.S. network, server and application management market -- which industry analysts estimate at \$4 billion."

The Linux Box is a bespoke software development consultancy that customizes open source projects for clients across a variety of sectors, providing professional services for organizations looking to gain competitive advantage, reduce IT costs and increase the control they have over their open source technologies.

"We are big advocates of Opsview. Its server software runs on Linux and monitors all common operating systems, applications, databases and networks, delivering significant cost and time savings over proprietary system monitoring software with greater flexibility and integration," said Elizabeth Ziph, CEO and co-founder of The Linux Box.

About Opsera and Opsview

Opsera Limited (www.opsera.com) was founded in 2005 by a group of highly experienced professionals and has grown to be the UK's leading open source software and technology services provider, with particular expertise in the financial services, media, publishing and information-intensive sectors. Launched as an open source community in 2003, Opsview is a well-established and fully featured product suite with a large worldwide user base. Opsera provides enterprise support, professional services and training for Opsview worldwide.

About The Linux Box

Founded in 1999, The Linux Box (www.linuxbox.com) is a professional services organization specializing in open source technology and the Linux platform in the server and cluster environments. It provides software development and customization services to a broad range of clients in industries ranging from energy and financial services to government, life sciences and the utilities.

Nagios is a registered trademark of Nagios Enterprises. All other trade names are the property of their respective owners.
