

Legrand Nuvo Whole Home Audio System Now Supported by HomeSeer Home Automation Platform

HEBRON, Ky., March 28, 2017 – Legrand, the global specialist in electrical and digital building infrastructures, announced that its Nuvo Player Portfolio whole home audio system is now supported by HomeSeer, a third-party home control platform. No updating of Nuvo software is required.

“This creates new selling opportunities for dealers whose customers have HomeSeer and want a home audio system that will run seamlessly as part of that platform,” said Desirée Webster, Senior Marketing Communications Manager. “For existing Nuvo customers, it expands their options for adding a home automation system.”

According to Webster, Player Portfolio support is enabled by the latest operating system release by HomeSeer. It allows the home controller to automatically discover the Nuvo music system on the home’s network and operate features including individual zone control of music selection and volume.

Legrand’s Nuvo Player Portfolio is designed for professional installation with a platform of amplifiers for use over WiFi or wired networks, including those using both types of connections. It is complemented by Nuvo’s full line of speakers including in-wall, in-ceiling and indoor/outdoor solutions. For more information about Nuvo products, [click here](#).
