

Checkin.com Partners with Paravision to Jointly Fight Online AI-Fraud and Identity Theft

SAN FRANCISCO and STOCKHOLM, June 24, 2024 – Paravision, a leader in trusted Identity AI, and Checkin.com, a renowned identity verification and user onboarding platform, are partnering to help fight AI-based fraudulent online activities and identity theft.

Online fraud is already a serious problem but it is expected to grow exponentially in the years ahead given recent advances in AI technology and Generative AI.

The multi-year partnership will enable Checkin.com to integrate Paravision's state-of-the-art fraud-detecting AI technologies into its suite of solutions, further bolstering security and trust for its enterprise customers.

Checkin.com, known for its innovative identity verification solutions, serves prominent clients across various sectors, including fintech, travel and gaming. With the new strategic partnership with Paravision, Checkin.com's customers, including Ryanair and Klarna, will benefit from enhanced protection against fraudulent activities and identity theft, ensuring a seamless and secure user experience.

"We are thrilled to partner with Checkin.com to bring our advanced AI technologies to their platform," said Doug Aley, CEO of Paravision. "As digital interactions become increasingly common, ensuring the authenticity and validity of these interactions is paramount. This collaboration reflects our commitment to providing trusted identity AI tools to leading global enterprises."

Checkin.com selected Paravision for its industry-leading technology, highlighting that the combination of their strengths creates a formidable force in the digital verification space.

"We have been looking for a true cutting-edge technology partner to further strengthen our offering within the fintech, travel and gaming sectors," says Christian Karlsson, CEO of Checkin.com. "This strategic partnership with Paravision will help to set a new standard for security and user trust in the identity verification and user onboarding space. It will help our customers grow faster and provide the highest level of security and user trust they demand."
