

Kramer and Smart Monkeys, Inc. Announce Enhanced Integration of ZeeVee AV over IP Systems

Kramer, Inc and Smart Monkeys, Inc. announce updated third-party integration

TEL AVIV/MIAMI, FL, June 9, 2025 — *Kramer, a leader AV over IP technology, and Smart Monkeys, Inc, specialists in integrating complex AV systems, announce an updated integration of the ZyPer Management Platform within the ISAAC Workspace.*

Kramer has revolutionized the Pro AV and IT industries with its award-winning ZeeVee hardware, encoders, decoders and software. The ZyPer Management Platform provides a simplified, high-level interface to ZyPer encoders and decoders.

ISAAC is a workflow platform that simplifies the management of complex audiovisual systems across a range venues, including theme parks, museums, and public attractions.

With an updated integration, the ZyPer Interface can be added as a panel within ISAAC, allowing configuration and adjustment of a ZeeVee system from inside your ISAAC Workspace. The Kramer team has also improved their integration with ISAAC Variables, enabling ISAAC users to better monitor and receive alerts for parameters such as device status, resolution, and more.

“We are so excited to expand the integration of ZeeVee with ISAAC,” said [Kramer representative]. “This new update offers more flexibility, enhanced monitoring, and more, in a way that makes sense for the end user.”

“This change expands the offering of both ZeeVee and ISAAC,” added Smart Monkeys CEO Stephan Villet. “The effort Kramer has put into enhancing this integration bring a lot of value to integrators and users alike.”

This enhanced integration will be on display at InfoComm Orlando, where attendees can learn more about Kramer’s new ZeeVee integration and ISAAC.
