

Kelley Blue Book Report: Average New-Vehicle Prices Climb Higher

For Fourth Consecutive Month, Flirt with All-Time High

- New-vehicle prices increased for the fourth straight month in December and, at \$49,740, were near the all-time record set in December 2022.
- Incentive levels held steady at 8% of ATP in December, higher by 44% year over year; the average new-vehicle incentive package in December was \$3,958.
- Sales of vehicles priced above \$80,000 boomed in December, an increase of 37% year over year and well above long-term averages.

ATLANTA, Jan. 15, 2025 /PRNewswire/ -- New-vehicle prices in December climbed higher for the fourth consecutive month and were close to the all-time high marked in December 2022. Average transaction prices (ATPs), as measured by Cox Automotive's Kelley Blue Book, typically peak in December, as high-priced models from luxury makers often sell well in the final month of the year. New-vehicle ATPs were \$49,740 last month, an increase of 1.3% year over year and higher by 1.5% compared to November 2024.

Kelley Blue Book

"It was a December to remember, in terms of both sales volumes and prices," said Cox Automotive Executive Analyst [Erin Keating](#). "As we reported just after the election, consumer sentiment and confidence have been on the rise. Vehicles, especially luxury vehicles, are typically an emotional purchase, and when consumers are optimistic, they go shopping. Rates dipped for a short bit late in 2024, discounts were higher, and the glass was half full. No wonder we saw the lift in both prices and volume."

New-vehicle sales incentives in December were mostly unchanged from November, holding steady at 8.0% of ATP or approximately \$3,958. The average incentive package on a new vehicle was higher by 44% compared to December 2023, when incentives equaled approximately 5.5% of ATP. Among large segments, incentives in December were highest for Entry-Level Luxury Cars (10.0%), Compact SUVs (9.7%) and Luxury Compact SUVs (9.4%) and lowest for Luxury Full-Size SUVs, Sports Cars, and Small/Mid-size Pickup Trucks. Volkswagen, Ram and Nissan offered the largest incentives among volume automakers, with all of them being above 13% of ATP. Toyota, Land Rover and Porsche incentives were among the lowest in the industry.

High-Priced Vehicles Sold Well in December, Pushing ATPs Higher

December typically sees an uptick in sales by luxury vehicle makers and, in general, for higher-priced vehicles, which is why industry average transaction prices usually peak in December. The all-time high for transaction prices was in December 2022, when new-vehicle inventory was just beginning to recover from historic lows and ATPs hit \$49,958. Last month, ATPs were near that record, at \$49,740, thanks in part to notably strong sales of vehicles transacting for more than \$80,000.

Recent data suggest that approximately 4.4% of total industry sales in a given month, or roughly 60,000 units, are for deals priced above \$80,000. Last month, Kelley Blue Book estimates that approximately 84,000 vehicles – or 5.6% of total

sales – transacted at prices higher than \$80,000, the highest volume ever. Vehicles in this category include the Land Rover Range Rover, Cadillac Escalade, BMW X7, GMC Yukon and Tesla Cybertruck. Also pulling ATPs higher: Robust sales of Full-Size Pickup Trucks – average price \$64,261. Segment volume was 223,293 units, according to Kelley Blue Book estimates, the highest point in 2024.

Brand Price Changes Year Over Year

In December, many brands posted ATPs well below year-ago levels. Year over year, Mitsubishi ATPs were lower by more than 12%. Buick and VW vehicles were also transacting lower last month than in December 2023, by 7.0% and 6.0%, respectively. All of Stellantis' major brands – Chrysler, Dodge, Jeep and Ram – posted notable ATP drops compared to year-ago levels as the company works to reduce elevated inventory levels. Chrysler and Dodge brand prices were both down 4.3% year over year; Jeep prices were lower by 6.3%, and Ram prices were lower by 1.6%.

Other brands saw notable year-over-year gains at the end of 2024. Cadillac ATPs were higher in December by nearly 13% compared to year-earlier levels. Tesla prices were higher by 10.5%, and Infiniti transaction prices increased by 8.1% year over year to \$65,667.

Electric Vehicle Prices Moved Higher in December, While Incentives Remain Elevated

Sales of EVs were strong in December as well and, with an average transaction price of \$55,544, helped push the industry-wide ATP higher. The December ATP for an EV was higher year over year by 0.8%, slightly below the industry average, and higher month over month by 1.1%.

Incentives for EVs remained elevated in December, although they were lower month over month at 14.3% of ATP, down from 14.7% in November. EV incentives were higher by 41% year over year and have been above 12% of ATP for six straight months. Strong sales incentives, which averaged more than \$6,700 per sale in 2024, were one reason [EV sales surpassed 1.3 million units](#) last year, a new record for volume and share.
